CEREC - SINGLE VISIT DENTISTRY

BETTER, STRONGER PROTECTION

Crowns are designed to be a permanent solution to broken, weak or damaged teeth. The crown or 'cap' fits over the remains of the existing tooth and restores its original size, shape and strength whilst also improving its appearance.

We custom make each crown using either traditional methods or by using the incredibly advanced CEREC system which allows us to design, create and place your new crown in a single appointment, and without needing to make impressions!

The CEREC system is also ideal for creating inlays for replacing your traditional amalgam fillings with more natural looking white fillings.

SINGLE VISIT DENTISTRY

CEREC enables us to insert incredibly natural looking ceramic crowns or partial crowns in a single session using the most advanced state-of-the-art technology.

The results are a more realistic crown that's custom made and inserted in only one visit- which means no uncomfortable impressions and no temporary crowns!

QUALITY & SATISFACTION GUARANTEED

- Ceramic crowns look and feel more like a real tooth- no dark edges are visible like conventional crowns.
- Ceramic is very close to the hardness of natural teeth, thus preventing wear of the tooth, which often occurs with other materials.
- Ceramic is very well tolerated so allergic reactions are rare unlike other methods and materials.
- The CEREC method is safe and gentle. Only the decayed tooth surface is removed, preserving the remaining healthy tooth substance.

Speak to us to see which treatment is best for you.

CEREC - THE PROCESS

THE CEREC ADVANTAGE

Many people dislike having to bite onto an impression tray for several minutes which can sometimes cause a numb mouth or aching jaw. With the CEREC system we use a cutting-edge fully 3D digital camera that captures a highly detailed impression of your mouth and transfers it to a computer- all within a few seconds.

This 3D image is then used to design your ceramic restoration and in 30 to 40 minutes your new crown is ready for placement.

Finally, we fit, polish and bind your new ceramic crown to your tooth and that's it.

No temporary crown and no return visit is necessary!
