# WE CAN HELP YOU MAKE THE MOST OF YOUR SMILE

---

**Every member of our team believes that having a set of healthy teeth is one of the most important ways of maintaining your overall health and well-being. And part of that well-being is having a brilliant smile that you can be proud of!**

At Gentle Dental & Implant Clinic we offer the most modern and advanced techniques to ensure that your smile is always shining bright! To make the most of your smile we offer the following cosmetic treatments.

## CEREC CROWNS

---

We custom make each crown using either traditional methods or by using the incredibly advanced CEREC system which allows us to design, create and place your new crown in a single appointment, and without needing to make impressions!

The CEREC system is also ideal for creating inlays for replacing your traditional amalgam fillings with more natural looking white fillings.

## WHITENING

---

Whitening your teeth is a simple and very popular way of improving your smile without needing a more invasive procedure (such as veneers).

At The Gentle Dental & Implant Clinic we use the Phillips Zoom! Whitening Program which you use in the convenience of your own home. The process is simple, safe and incredibly effective.

## DENTAL BRIDGES

---

An attractive and effective way to fill the space left by a missing tooth or teeth is by having a custom made bridge put in place.

At The Gentle Dental and Implant Clinic we offer various bridge options. Your dentist will help you decide which type of bridge is best for you.

## COSMETIC VENEERS

---

Porcelain veneers are a quick, simple and incredibly effective way to enhance the appearance of chipped, broken, misaligned and worn teeth.

Made from wafer-thin pieces of porcelain, each and every veneer is custom-made to provide a strong, stain-resistant and naturally looking appearance to the affected tooth. They are permanently bonded to your teeth for a stunning look and feel and can be applied to single or multiple teeth to add a uniform shape, colour and symmetry to your smile.

## GUMMY SMILES

---

Sometimes a person's smile reveals more of the gum than what they may think is attractive. A healthy smile usually only reveals 2mm of gum whilst anything over 3-4mm may be considered by some to be distracting, or 'gummy'.

If you feel that too much of your gums are showing, our dentist may be able to recommend the use of a muscle relaxant (Botox) to relax your facial muscles for a more natural looking smile.

## WHITE FILLINGS

---

At The Gentle Dental & Implant Clinic we offer our patients white fillings made from resin and inorganic materials such as glass ceramics and/or porcelain. This more natural looking material, when mixed with enamel and dentin bonding techniques, can restore damaged teeth and give them a more natural look and feel- including the front teeth.

## COMFORTABLE DENTURES

---

Gum disease, tooth decay and injury can all lead to the loss of your natural teeth. Dentures can replace them and restore your natural smile.

A full set of dentures are traditionally made of an acrylic base (the 'plate') and a set of acrylic teeth which fit over your gums. A partial or 'flexible' denture is attached to the teeth on either side of a gap- only replacing the teeth that are missing rather than your entire set.

In order to ensure your denture(s) fit as comfortably as possible, your dentist will need to make an impression which they will give to a technician who will then custom build your new dentures.
