DENTAL IMPLANTS

# A BETTER WAY TO REPLACE MISSING TEETH

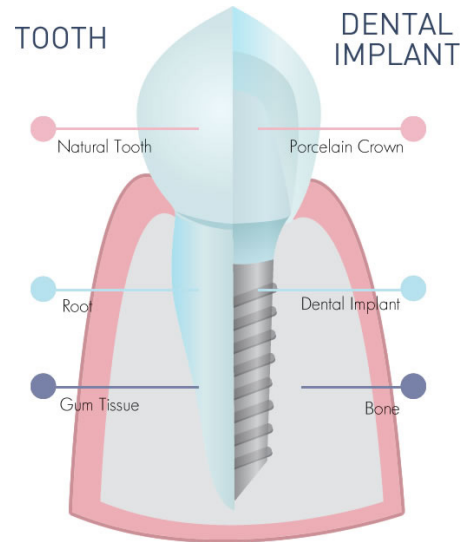

Dental Implants are a revolutionary and advanced technique for replacing one or more missing teeth or anchoring dentures in place. Implants offer a more natural appearance, lower maintenance and a long life of service.

Dental Implant Options:

- Single Tooth Implant
- Multiple Tooth Implant
- Implant Support Denture
- All on Four

We understand that some patients are nervous but you can relax with our sedation options. If you would like to know more just ask a member of our team about sedation options available for you.

## Dental Implant Experts

We pride ourselves on being the implant experts. We use both the Biohorizons and the Nobel Biocare implants to treat a variety of patients.

## Revolutionary Replacement

Implants consist of a titanium screw that integrates with the jaw bone to create a secure foundation for crowns, bridges or attachments to hold dentures in place.

This advanced technique has proven popular with patients wanting a low maintenance alternative to dentures.

## Integration

Once the titanium rod screw is in place, we allow the jaw bone to heal around it [osseointegration] for roughly 3 months. During this time of integration, it's standard for the patient to wear a denture to temporarily fill the gap.

Once the screw is fully integrated, it is fitted with a single crown, bridge or removable denture.

**The entire process generally lasts between 3-6 months.**

## Benefits

### Keeping the bone healthier for longer

Dental implants transmit chewing forces to the jaw, stimulating it and halting the bone loss associated with missing teeth. A hygienist will discuss and recommend to you the appropriate items.

### Healthy teeth are not compromised

Dental Implants do not require the grinding down of healthy teeth for abutments.

### Restore the ability to chew properly

Implants restore the ability to chew properly, allowing a complete and healthy diet.

## Precision with 3D Technology

Our state-of-the-art 3D imaging makes the dental implant process faster because we can plan out the entire procedure in advance which then reduces the time you spend at our practice. Giving you the best results.

### Advantages of using CT scans include:

- Less invasive surgical techniques
- Reduced treatment and recovery time
- Minimises complications
- More successful placement and enhanced end results.
